Summary

I am a researcher at the FBK NLP in Trento, Italy. This Fall, I will start my PhD at the Bethge Lab in Tübingen, Germany, as an ELLIS PhD Student and as part of the International Max Planck Research School for Intelligent Systems (IMPRS-IS). I also work with Tom Silver's group for robotics and planning in Princeton, US. Previously, I obtained my MSc degree in Machine Learning, Data Science and Artificial Intelligence from Aalto University in Helsinki, Finland.

I am interested in developing autonomous AI agents that learn from experience and adapt dynamically to new situations. For this, my research is at the intersection of large-scale vision and language models, reinforcement learning, and planning. In particular, I believe world modeling to be a key component for building intelligent agents that can reason about the world and plan their actions accordingly. I work with both simulated games and real-world robotics as environments for agents to learn and adapt in. I am also curious about the connections between AI and cognitive science, and how insights from human cognition can inform the development of more intelligent agents.
